Authorization for this examiner's amendment was given in a telephone interview with Joseph Wrkich, Reg. No. 53,796 on April 25, 2008.

The application has been amended as follows:

55. (Currently Amended): A document data handling apparatus for coupling a plurality of document data having [[a]] unique file names, wherein each of the plurality of document data includes a plurality of types of files, said apparatus comprising:

a memory;

a document data coupling control part including computer executing programs loaded in the memory configured to control a document data coupling process in which the plurality of document data managed by a document managing part are coupled together to form first document data; and

a document name generating part configured to determine a name of one of the plurality of document data used to create the first document data, to assign the determined name of one of the plurality of document data used to create the first document data to the first document data, and to rename each of the unique file names of the plurality of document data used to create the first document data so as to include the name assigned to the first document data and an index indicating an order of arrangement for the plurality of document data in the first document data.

60. (Currently Amended): A computer document data handling method for coupling a plurality of document data having [[a]] unique file names, wherein each of the plurality of document data includes a plurality of types of files, the method comprising:

controlling a document data coupling process in which the plurality of document data are coupled together to form first document data;

determining a name of one of the plurality of document data used to create the first document data;

assigning a name to the first document data that is the name of one of the plurality of document data used to create the first document data determined in the determining step; and

renaming each of the unique file names of the plurality of document data used to create the first document data so as to include the name assigned to the first document data and an index indicating an order of arrangement for the plurality of document data in the first document data.

65. (Currently Amended): A computer readable recording medium storing instructions for execution on a computer system, when executed by the computer system, causes the computer

system to perform a method for coupling a plurality of document data having [[a]] unique file names, wherein each of the plurality of document data includes a plurality of types of files, the steps comprising:

controlling a document data coupling process in which the plurality of document data are coupled together to form first document data;

determining a name of one of the plurality of document data used to create the first document data; and

assigning a name to the first document data that is the name of one of the plurality of document data used to create the first document data determined in the determining step; and

renaming each of the unique file names of the plurality of document data used to create the ~~second~~ first document data so as to include the name assigned to the first document data and an index indicating an order of arrangement for the plurality of document data in the first document data.

66. (Currently Amended): The computer readable recording medium of claim 65, further comprising: managing a correspondence between the document name of the first document data and the names of the plurality of document data from which the first document data is thus obtained.

68. (Currently Amended): The computer readable recording medium of claim 65, wherein the step of controlling comprises controlling, upon coupling document data together, the order of arrangement of the plurality of document data in the first document data.

69. (Currently Amended): The computer readable recording medium of claim 65, further comprising:

displaying a page through which an instruction by a user for coupling document data together is received.

71. (Currently Amended): The computer readable recording medium of claim 65, further comprising:

controlling a document decomposing process in which the first document data is decomposed into separate documents corresponding to the plurality of document data used to create the first document data; and

assigning names to the separate documents that are identical to the names given to the plurality of document data in the renaming step.

Allowable subject matter

3. The following is an examiner's statement of reason for allowance:

None of the references of record Jackson (US 5,960,444) and Schloss (US 6,249,844) teaches or suggests the claimed (Claims 55, 60 and 65) invention having, in addition to the other limitations in the claims, the limitation of assigning the determined name of one of the plurality of document data used to create the first document data to the first document data and renaming each of the unique file names of the plurality of document data used to create the first document

Art Unit: 2163

data so as to include the name assigned to the first document data and an index indicating an order of arrangement for the plurality of document data in the first document data.

Dependent claims are allowable because they depend from base claim.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance".
